

bioMérieux SA - DCF Valuation Summary

Independent equity-research portfolio | Valuation date: 19 August 2026 | Prepared by Erica Zheng

CURRENT PRICE	DCF VALUE / SHARE	IMPLIED UPSIDE	WACC	TERMINAL GROWTH
€73.20	€110.09	+50.4%	6.87%	2.50%

Valuation overview

Metric	Value
PV of forecast-period UFCF	€1,967.8m
PV of terminal value	€10,760.3m
Enterprise value	€12,728.1m
EV-to-equity bridge adjustments	+€302.5m
Equity value	€13,030.6m
Diluted shares	118.368m
Implied value per share	€110.09

Base-case conclusion

The DCF implies approximately €110 per share versus a €73.20 market price. The result is supported by the updated FY2026E-FY2030E cash-flow forecast and a 6.87% WACC. Terminal value contributes 84.5% of enterprise value, so the sensitivity range is more informative than the single point estimate.

Primary method: perpetual-growth DCF | Discounting: mid-year convention with a 2026 stub period
All monetary figures are in EUR millions unless otherwise stated.

DCF Methodology, Assumptions & Sensitivity

Key inputs are sourced where observable; judgmental assumptions are explicitly identified and sensitivity-tested.

WACC build

Input	Base case	Basis
Risk-free rate	3.26%	10Y German Bund
Equity risk premium	4.18%	Damodaran implied mature-market ERP
Unlevered beta	0.88x	Europe Healthcare Products sector
Relevered beta	0.91x	bioMérieux D/E and tax rate
Cost of equity	7.07%	CAPM
Pre-tax cost of debt	3.52%	Annualised H1 interest / average debt
After-tax cost of debt	2.66%	$K_d \times (1 - \text{tax})$
Equity / debt weights	95.4% / 4.6%	Market-value capital structure
Calculated WACC	6.87%	Base discount rate

Valuation methodology

2026 stub period

H1 actual UFCF is derived from reported H1 CEBIT, D&A, capex and working capital. Only cash flow remaining after 19 August is discounted.

Forecast period

FY2027E-FY2030E UFCF is linked directly from the updated five-year forecast; no cash flows are hardcoded again.

Terminal value

Perpetual-growth method using 2.5% terminal growth. Exit-multiple cross-check is deferred until comparable-company analysis is complete.

EV-to-equity bridge

Adds reported net cash and non-operating investments; deducts post-employment obligations and minority interests. Lease liabilities are not deducted twice.

Sensitivity - implied value per share

WACC / g	2.0%	2.5%	3.0%
6.4%	€110.91	€123.15	€139.00
6.9%	€99.73	€109.32	€121.37
7.4%	€90.62	€98.32	€107.76

Key limitations

- 84.5% of EV comes from terminal value.
- Beta uses a sector dataset, not a full peer median.
- Market price is point-in-time.
- Exit-multiple cross-check is pending comps.
